## PROJECT

### FLIPKART CLONE

[project](#) | [source code](#)

- developed a web app with back-end on Node.js , Express.js & MongoDB database & front-end using HTML , CSS & React.js.
- flipkart clone is a cloned fullstack application of famous ecommerce company known as flipkart which is fully responsive and work with all devices.
- which gives features of creating a personal account , adding and removing items from cart.
- added search functionality to search for specific item.
- used mongodb database which populates data dynamically.
